

ABSTRACT

5 A multi-layered tube is composed of at least two
layers formed of different resin compositions containing a
polypropylene resin and at least one copolymer selected from
the group consisting of hydrogenated block copolymers
obtained by hydrogenation of block copolymers formed of a
polymer block from a vinyl aromatic compound and an isoprene
and/or butadiene polymer block and a hydrogenated copolymer
10 obtained by hydrogenation of a copolymer from a vinyl
aromatic compound and butadiene.

15 The multi-layered tube can be used as a multi-
layered tube for medical use which is excellent in
flexibility and anti-kinking properties, further, which has
durability against sterilization with high-pressure steam,
which is free from generation of any toxic gas when
incinerated, and which is excellent in hot solvent bonding or
solvent adhesion to other tube, and the like.
